

Safety culture and its impact

Jop Groeneweg & Frank Guldenmund

Leiden University / Delft University of Technology

Imperial College Safety Seminar: Tragedies and opportunities: Safety failures in Universities

Baden Powell Conference Centre. London, 21 February 2017

Scope

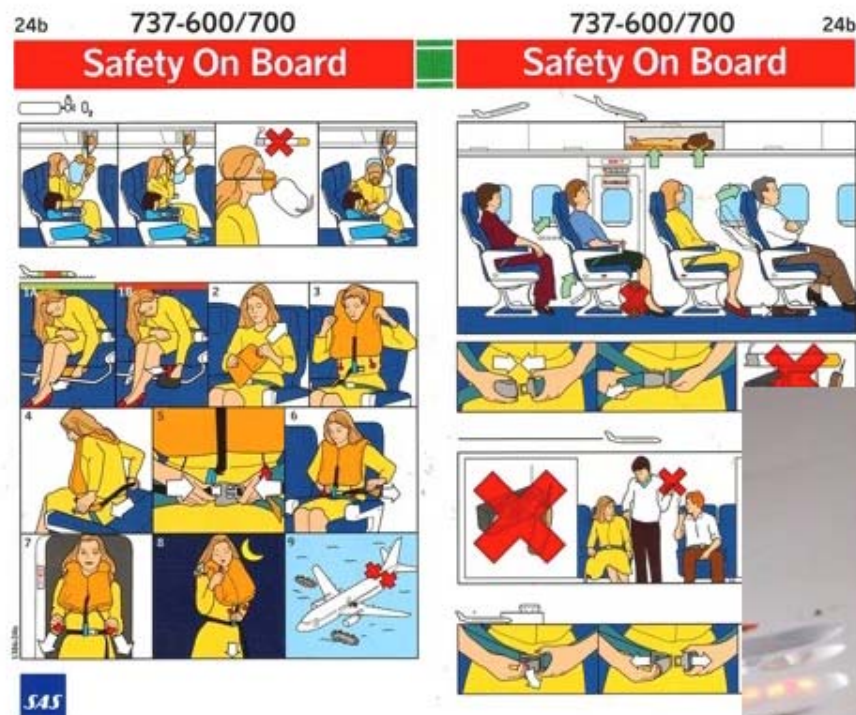

- In many organisations improving the safety culture is nowadays seen as the 'holy grail' of safety
- Safety culture is at best an 'enabler' of taking actions, it is not a miracle cure
- Improving a culture in daily practice is more related to changing a 'mindset' than to achieve a certain score on a 'culture test'

Risk management: The miracle on the Hudson

MIRACLE ON THE HUDSON
By Ken Osbon

Procedures and a demonstration

However....

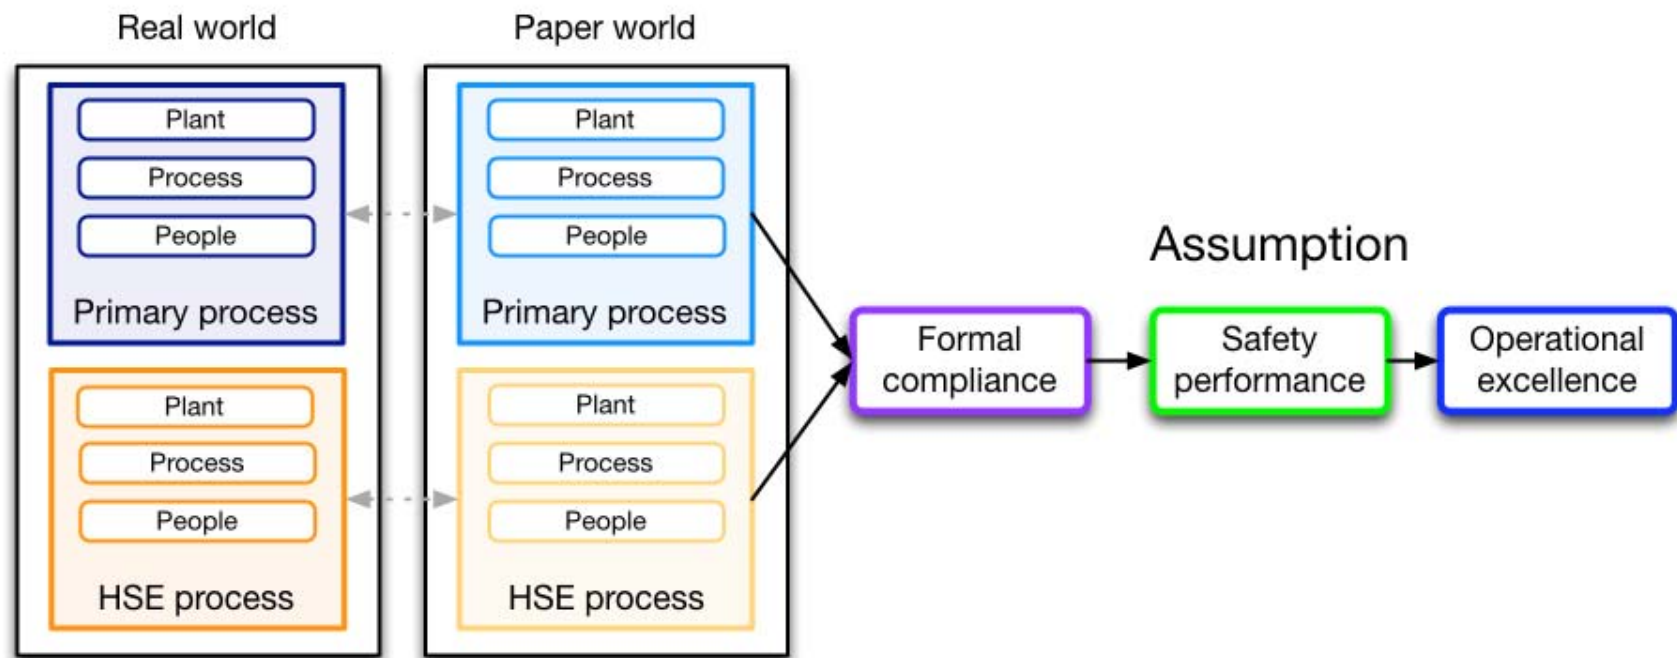

Except a few

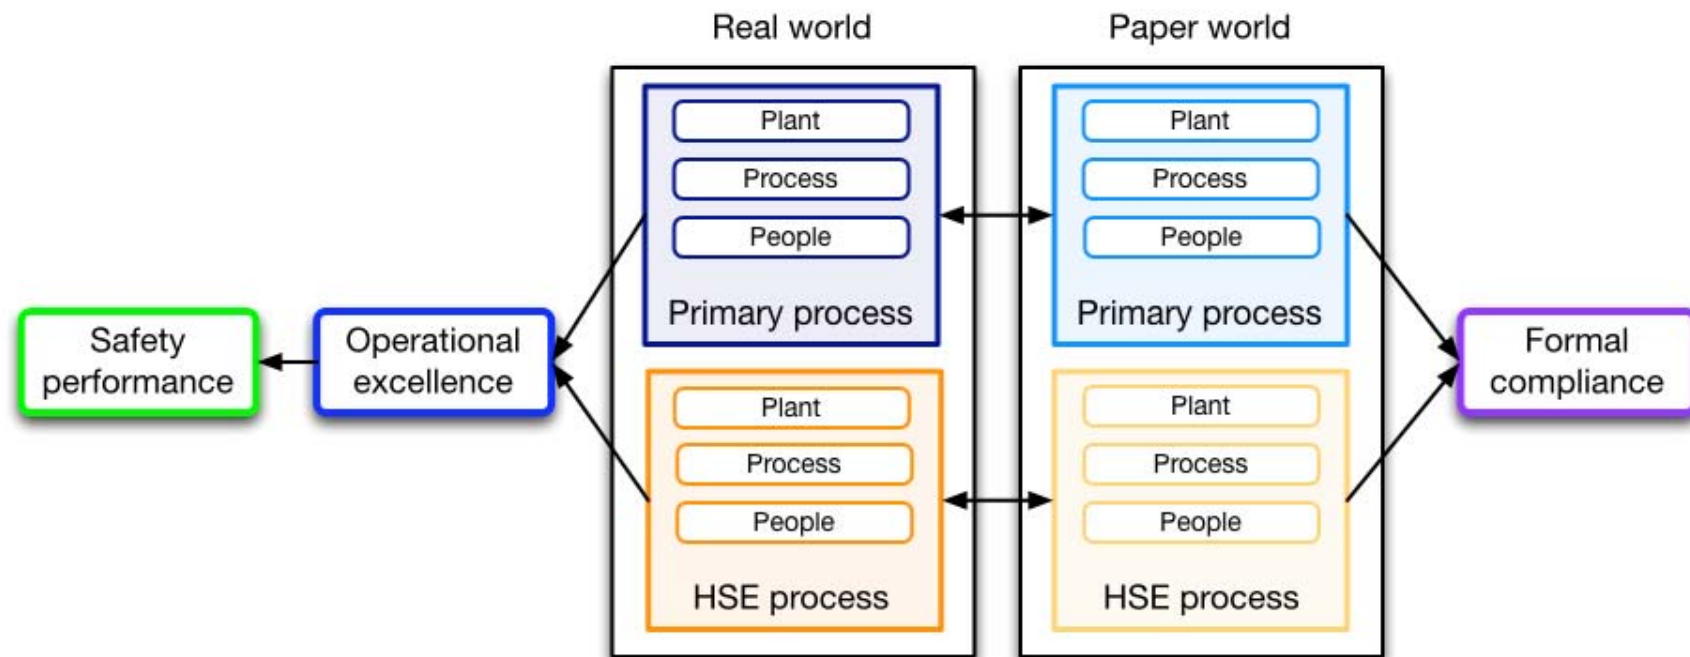

- At least 27 million flights per year
- 3.3 billion passengers have been exposed to the safety talk about the life vests per year
- Millions of gallons of fuel have been wasted transporting them
- And in the one and only case people could use them they didn't
- Would you dare to recommend to take them away?

The 'bureaucratic fallacy': moving from compliance

...to operational excellence

Back to some cultural basics

- What is organisational (safety) culture?
- What does it do?
- How does it develop?
- How can it be influenced?

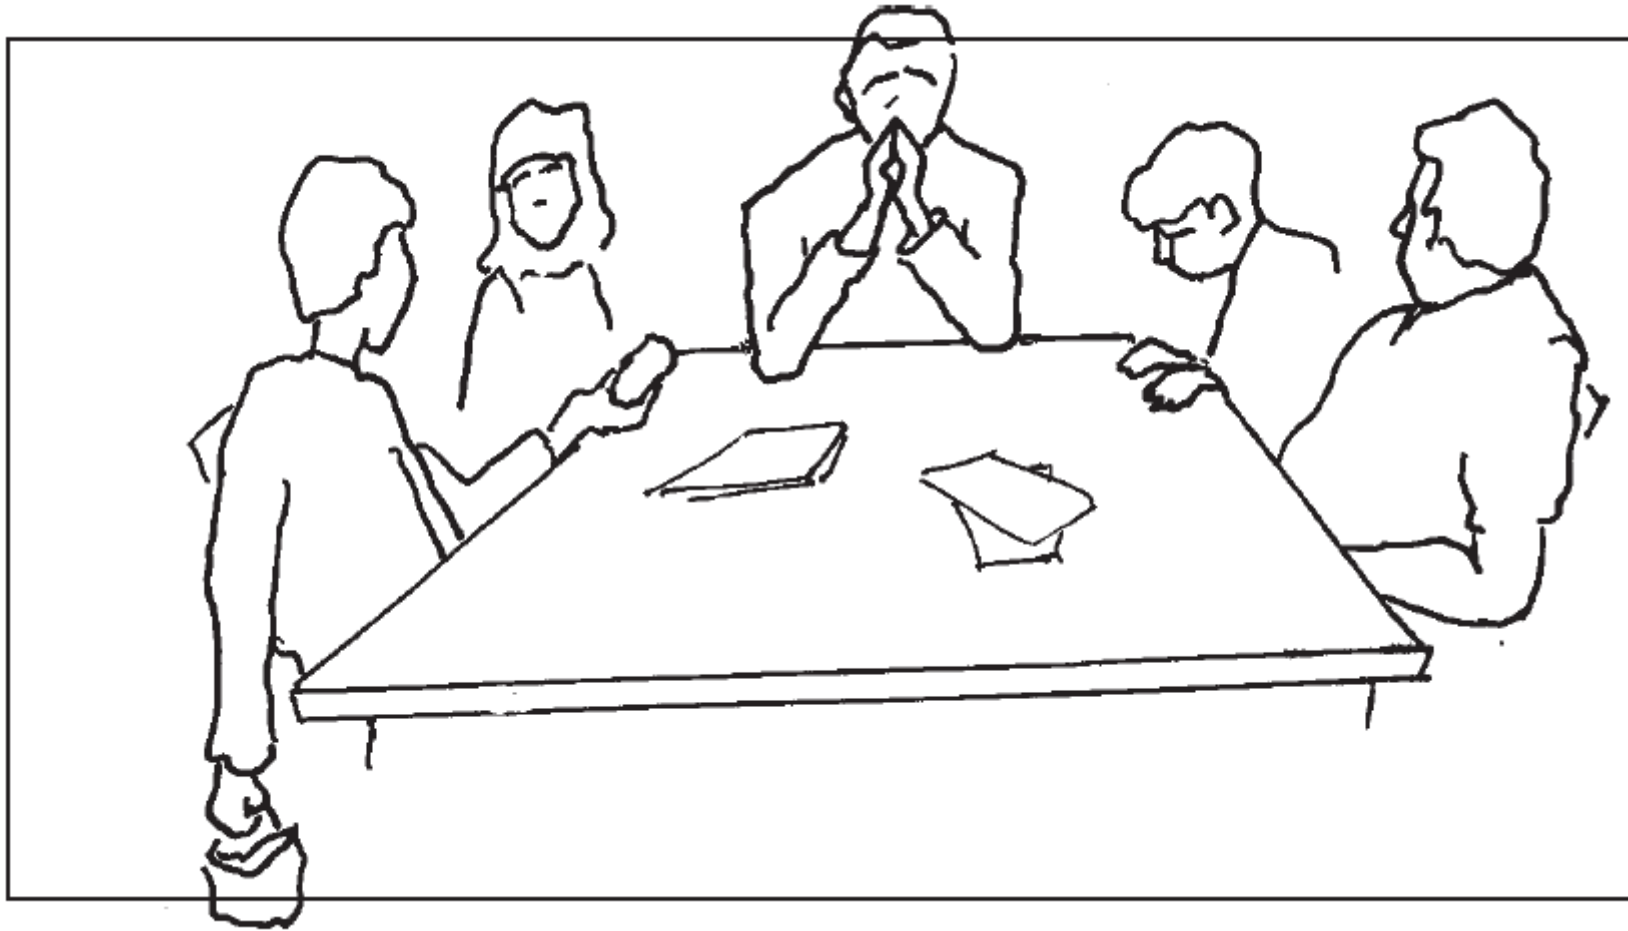

Organisational culture defined

‘Organisational culture is the set of common norms, values and world views that develop in an organisation when its members interact with each other and its context’

Put in other words: culture is about a shared understanding of your (working) environment, which you observe through your ‘cultural glasses’

(Bang, 1999)

An example...

Some typical answers

- Difficult conversation
- A meeting about to begin. The man in the middle presides and one guy is not involved
- A family that has just received a sad letter
- People looking for a solution to some problem. The guy on the left is hiding the important evidence and showing something unimportant to the others
- A religious ritual

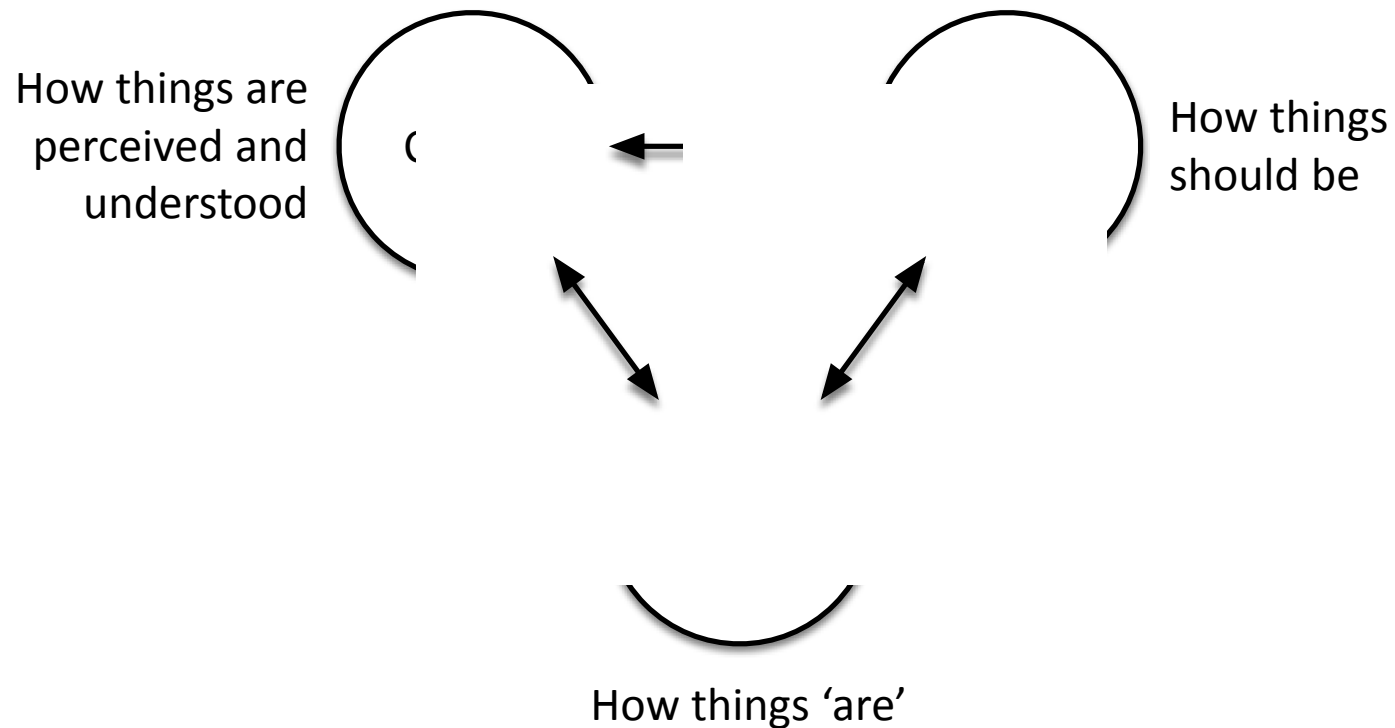

In short...

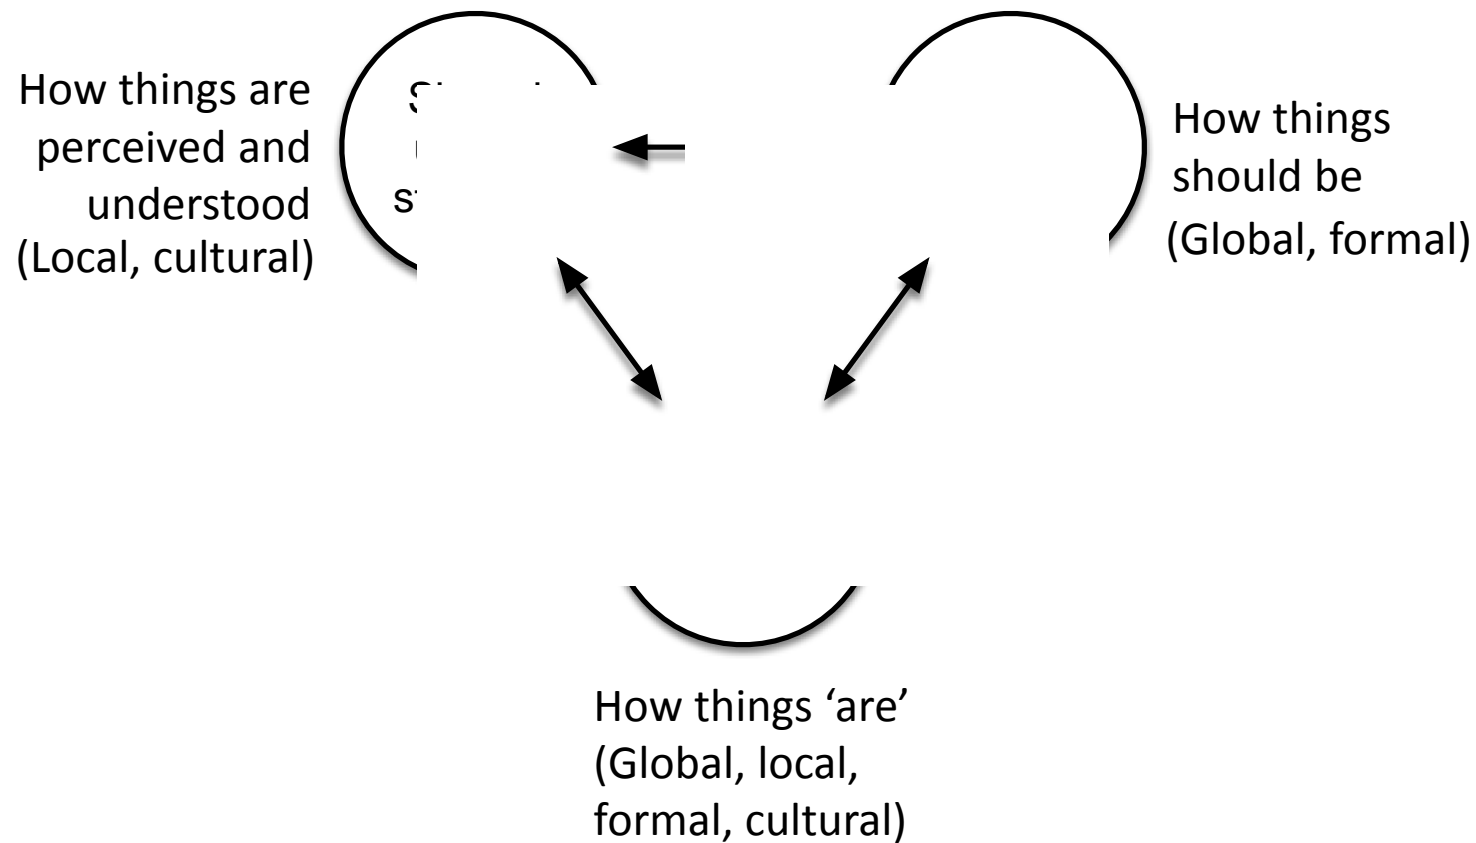

Perception and 'reality'

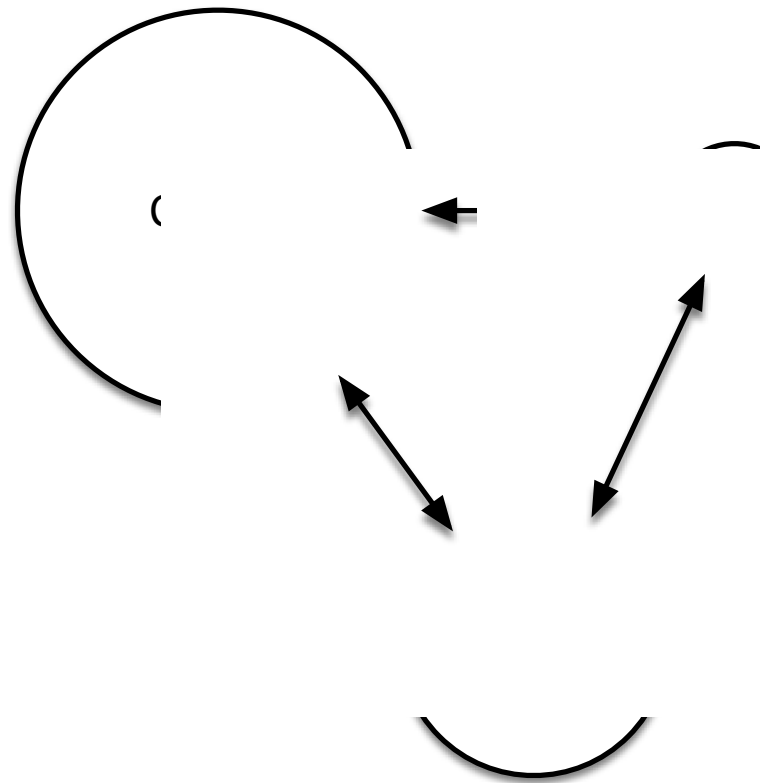

The organisational triangle I

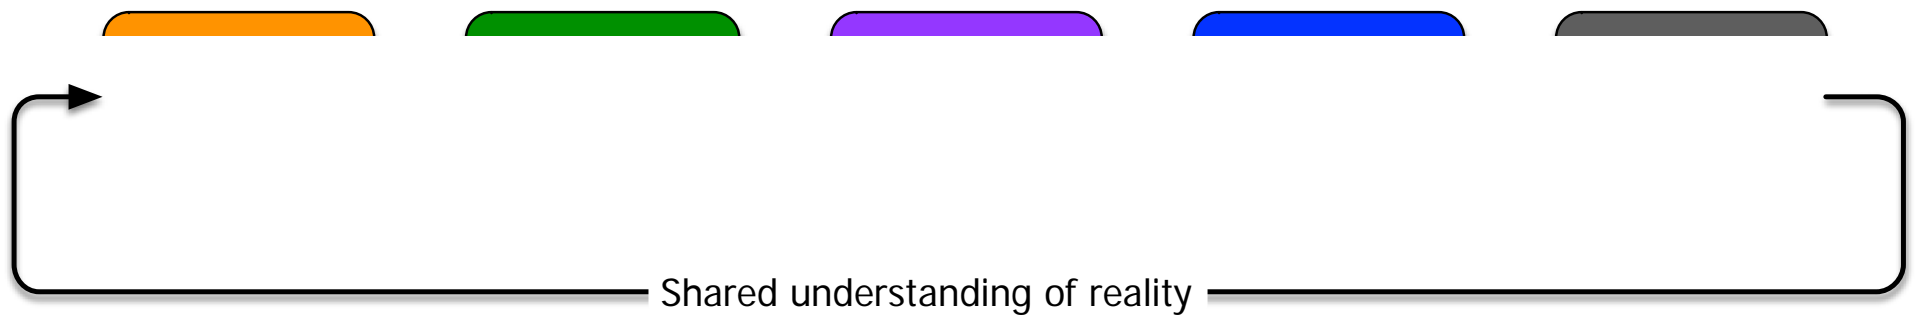

The organisational triangle II

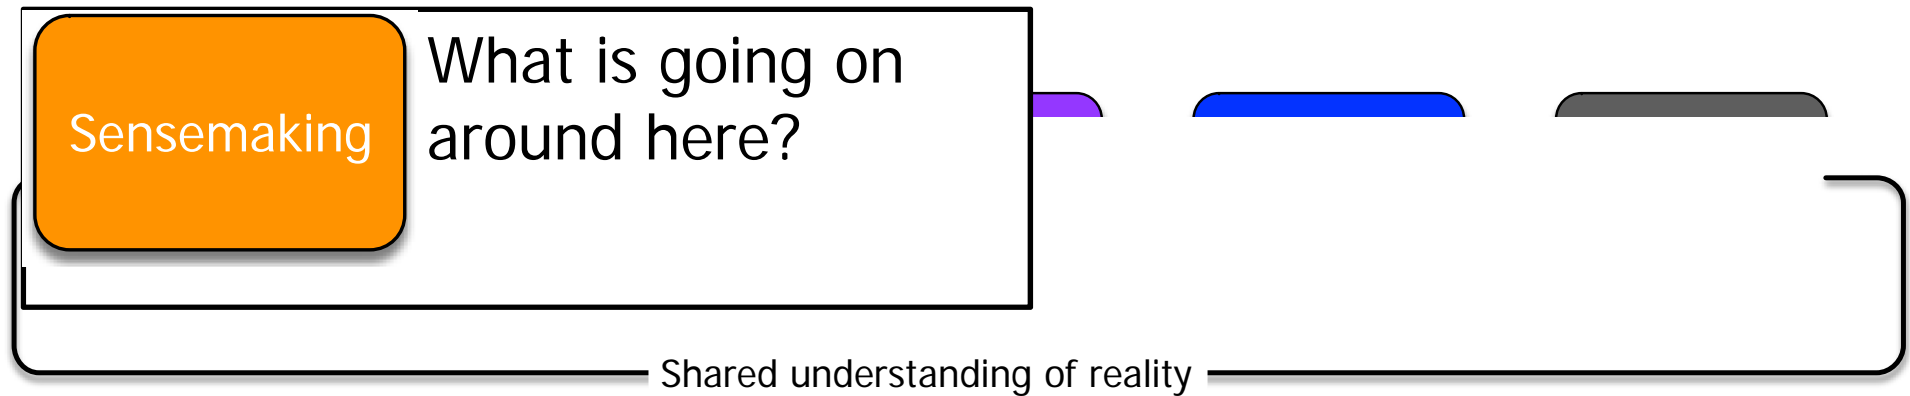

The organisational triangle III

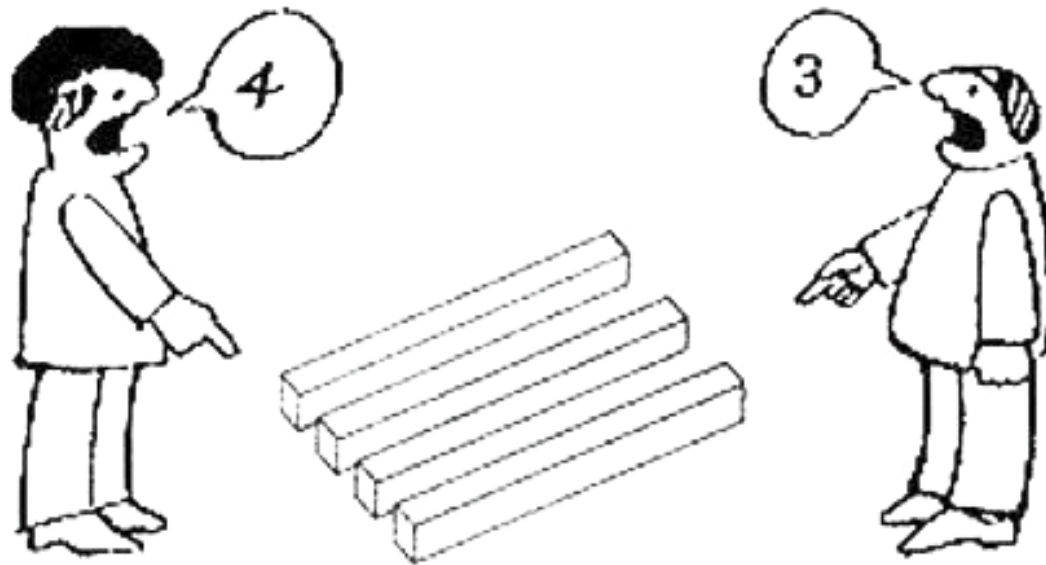

The culture development model

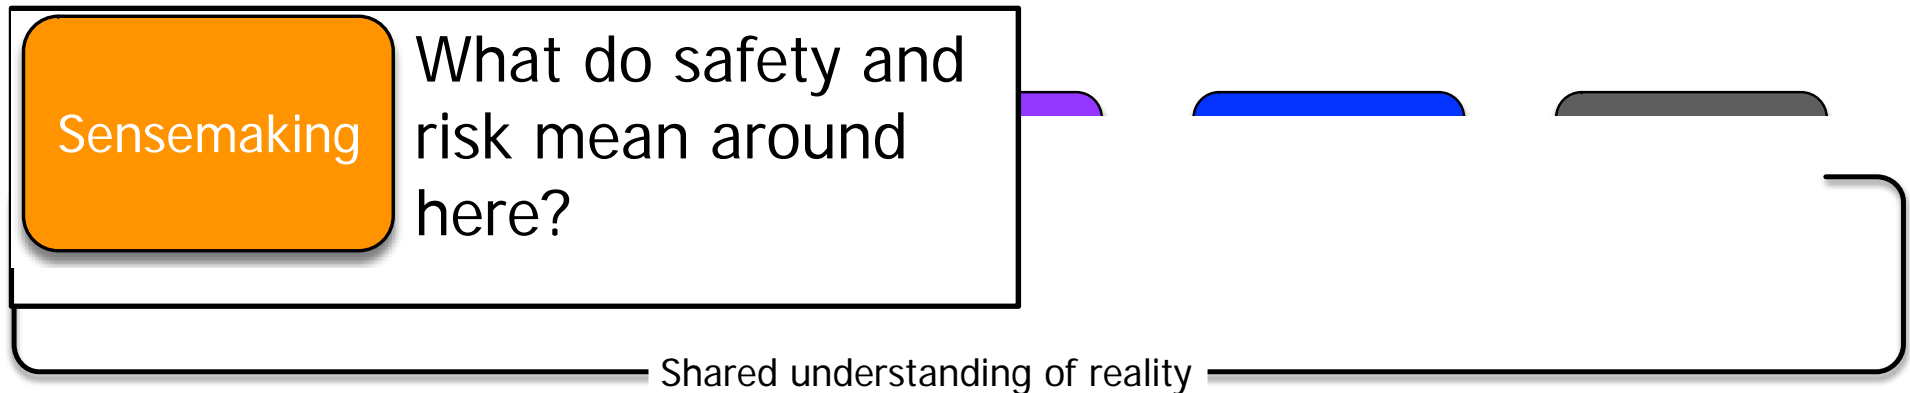

Sensemaking

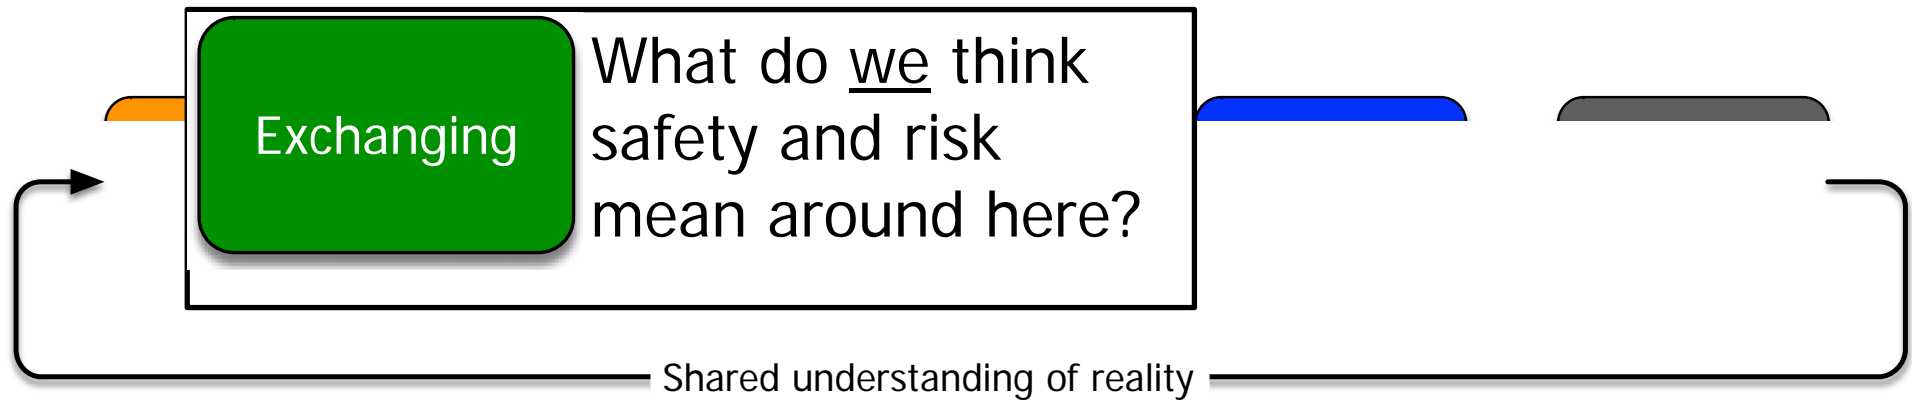

Observation and sensemaking

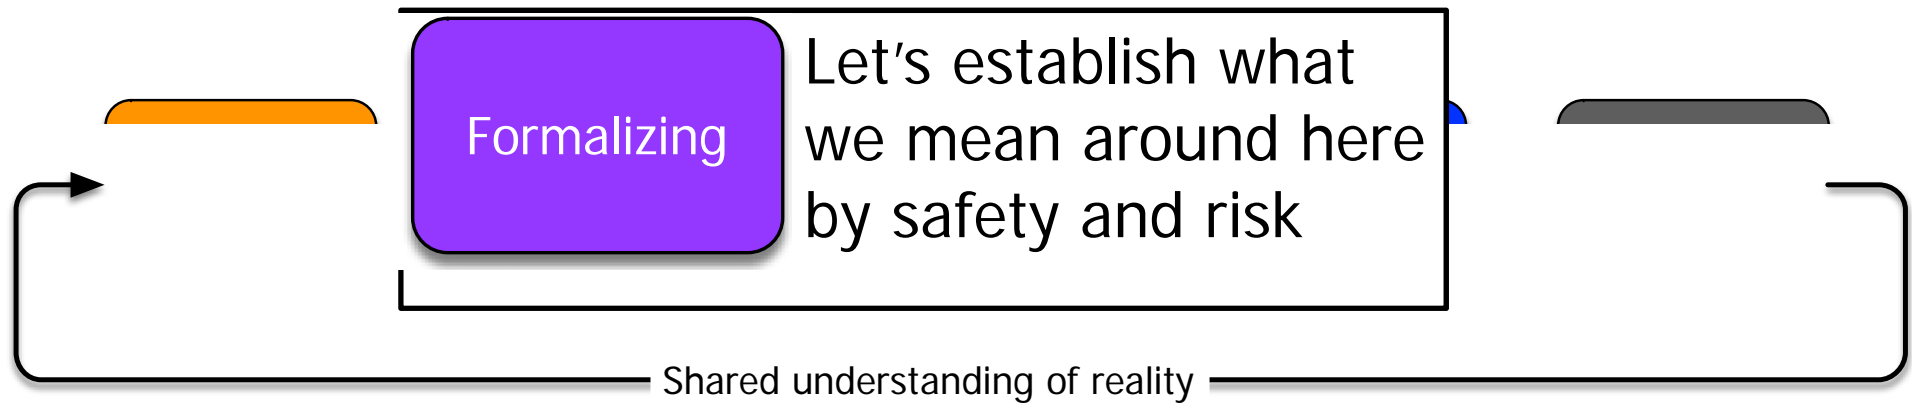

Making sense of safety and risk

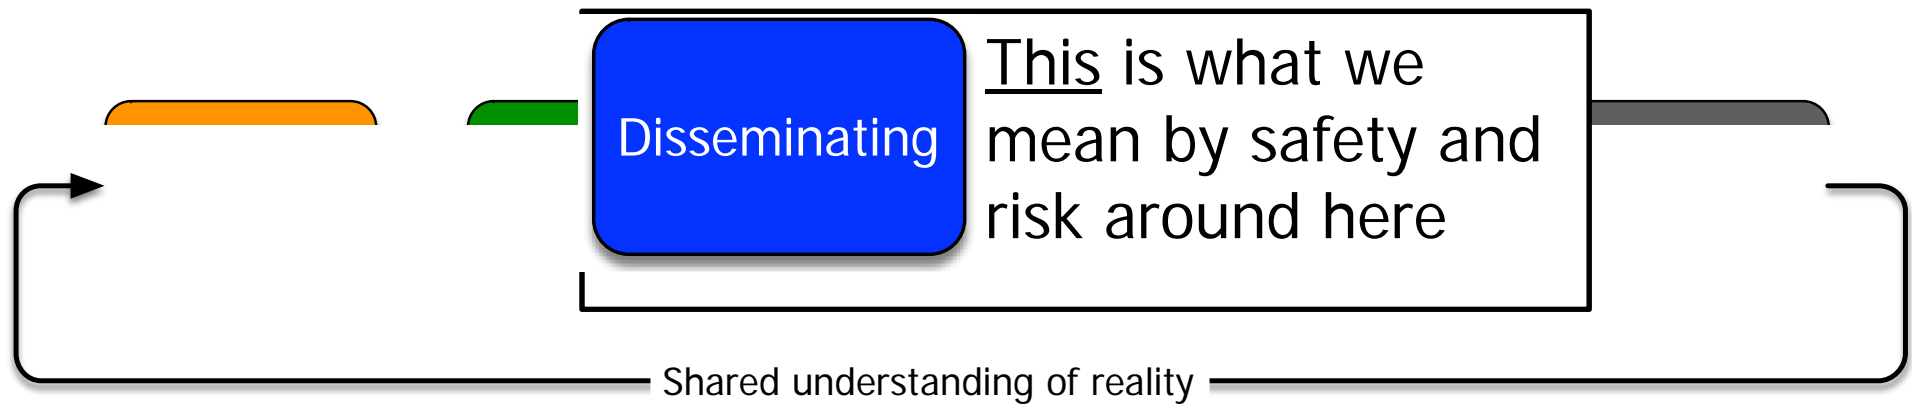

Exchanging

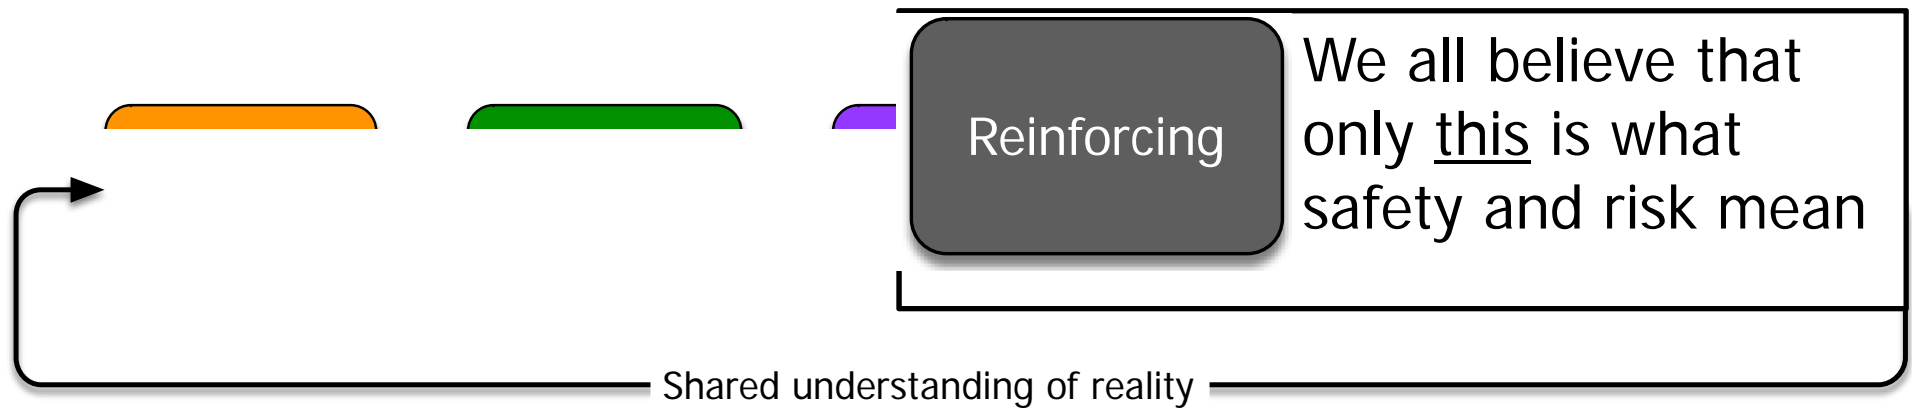

Formalizing

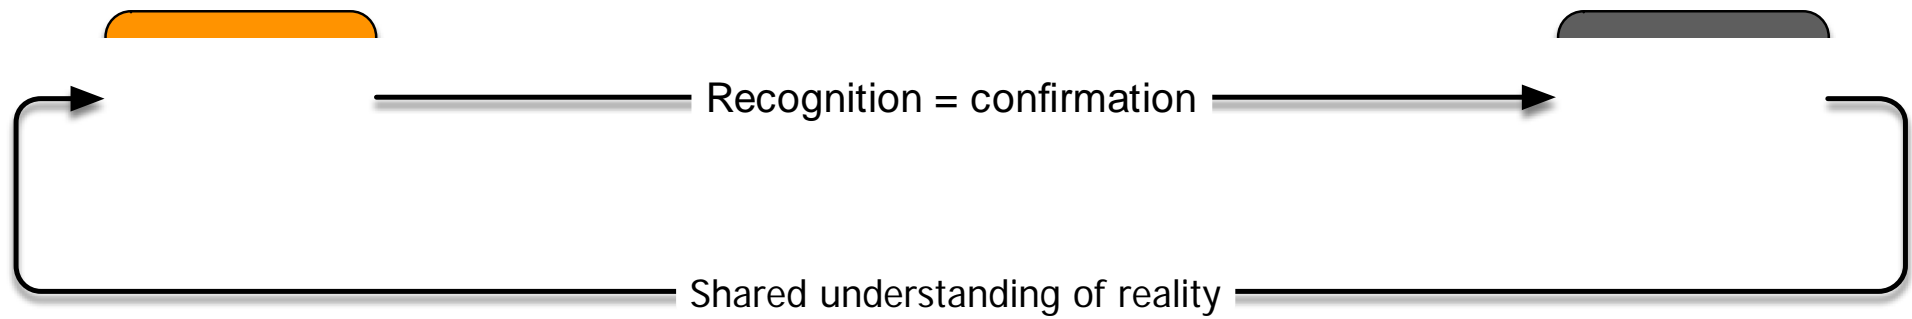

Disseminating

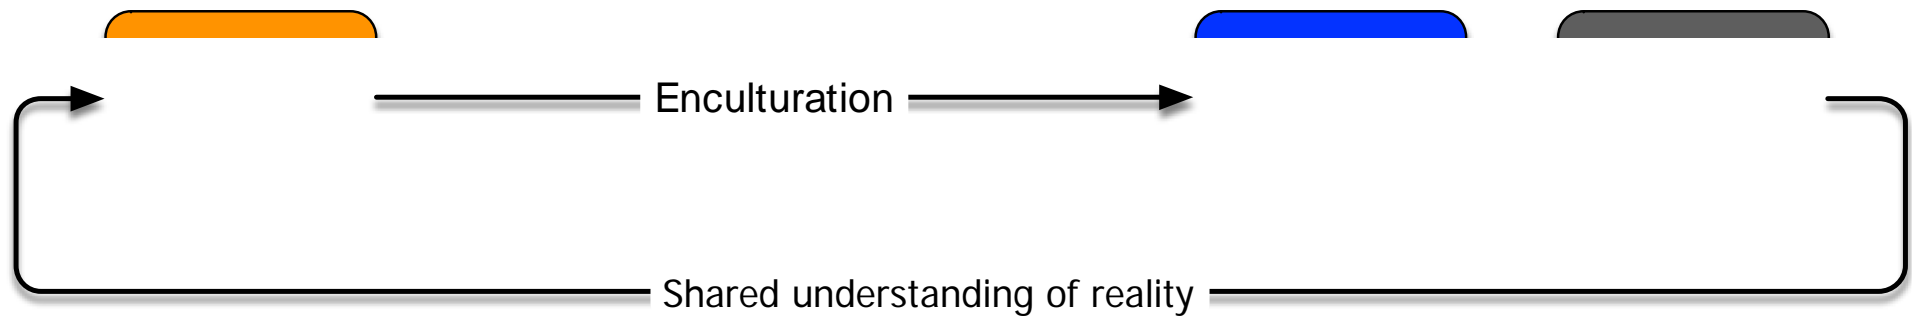

Reinforcing

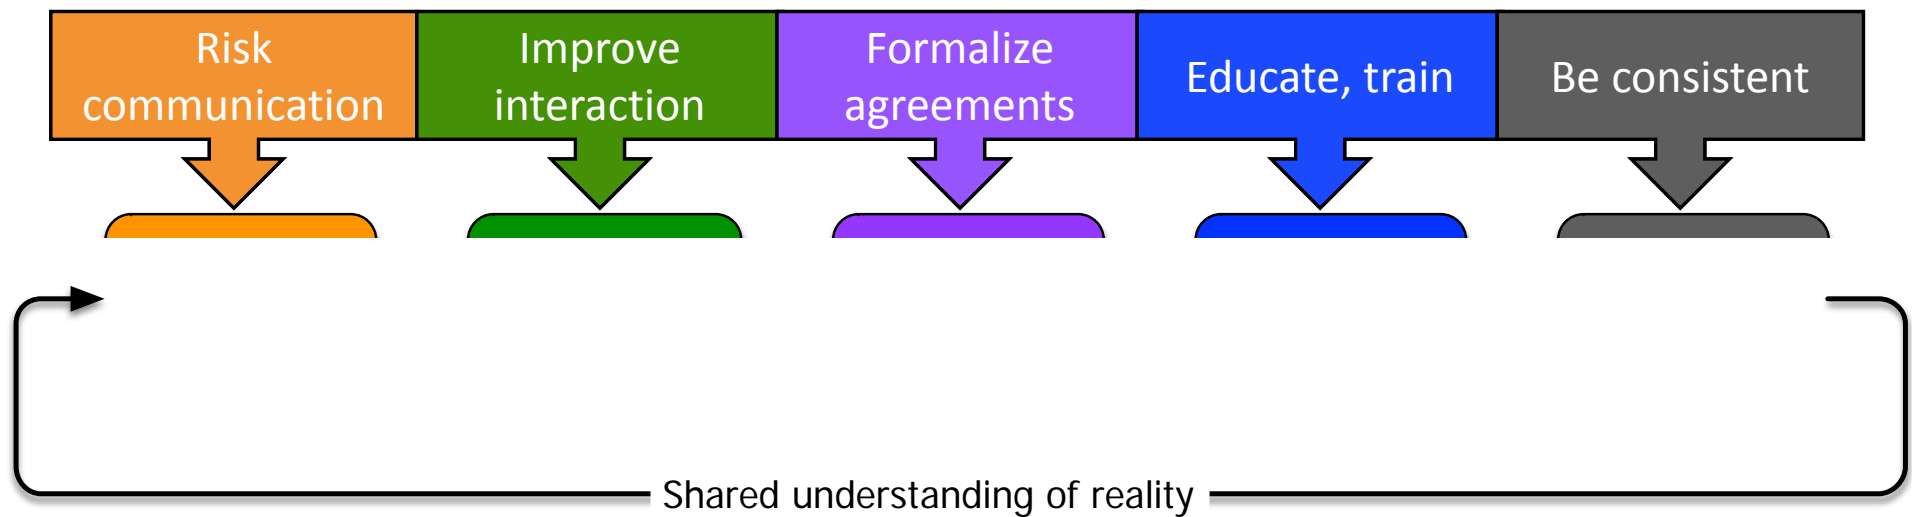

Business as usual

Newcomers

Influencing culture

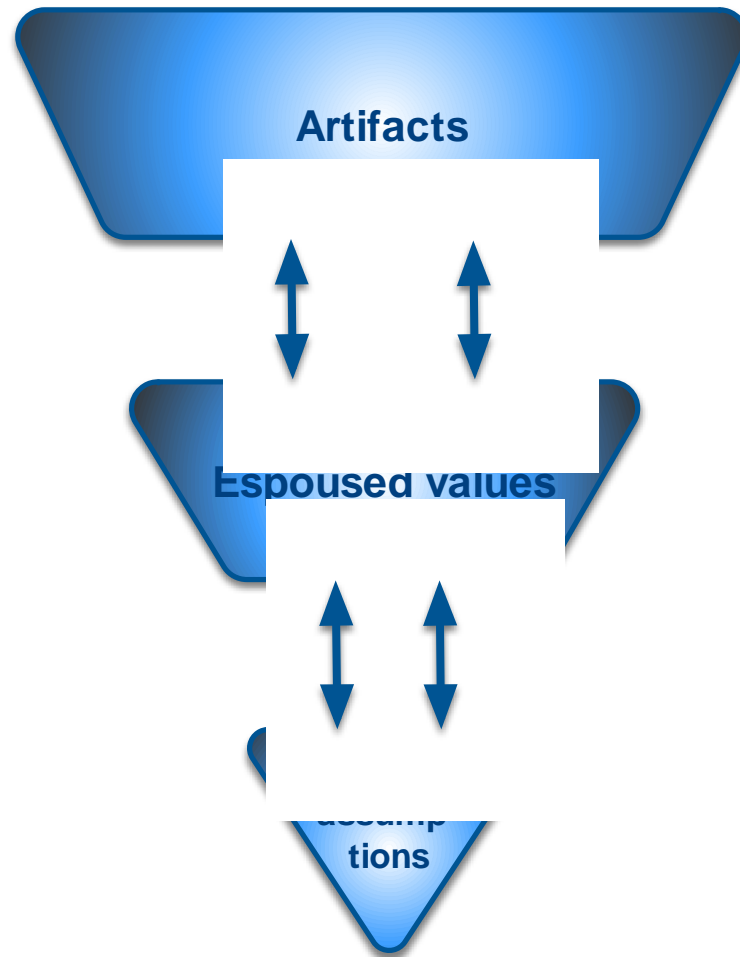

Conclusions

- In an ideal world, structure, culture and daily reality are well-balanced and not conflicting (too much)
- Culture can overshadow structure (but probably not vice versa)
- Influencing culture means influencing common sensemaking (or a common 'mindset') and be consistent about it
- Simply telling people what to do is often quite useless

Questions?

'Measuring' culture: the challenge

What you see,
hear, smell, ...

What people tell you
they do, think, feel

What people really
moves but is self-
evident (subconscious),
or hidden to them

Various other psychological influences

- Social desirability (what you are supposed to say)
- 'Political' correctness (what you should say; esp. with safety an issue)
- Herd-instinct, conformity (the Asch experiment)
- False consensus (people incorrectly think their opinions are 'normal' and shared by most others): denial
- Pluralistic ignorance (people act openly according to a norm they think is shared, but in fact isn't): self-supporting
