

StudentShapers Recruitment: Calling all Phase 1b/c, 2 and 3 medical students

Developing a new digital health theme for primary care undergraduate medical education

Bursary: £55/week

Who should apply: Phase 1b/c, 2 or 3 medical students

Campus/Location: Remote working

Project details:

Students will be co-designing both resources and the overall approach for teaching digital health in three key areas: remote consultations, patient generated data and electronic patient records. Your expertise and lived experience as students of unmet digital health teaching needs, as well as strategies for delivering such teaching would be highly valued.

Students will have autonomy to explore which areas of digital health they feel more relevant for their educational needs. You will be encouraged to consider your own experience, other students, and the wider literature before co-developing a roadmap for digital health with faculty. You will also have much autonomy in designing how these are delivered, subject to the wider constraints of the curriculum delivery and quality assurance processes.

We will meet with you regularly to ensure you feel supported and the goals are being met. We would also encourage you to join a research team within the department (eCOP) and to partner with us on evaluation.

The strategy co-developed for these three key areas will then spiral through all the undergraduate primary care courses in the MBBS programme at Imperial.

Students will also partner with us in how these new resources and learning and teaching methods are evaluated.

Start: Late November 2021

End: 30rd June 2022 (with flexibility around exam time)

How to apply: Expressions of interest should be sent to r.ewe@imperial.ac.uk with a 300 word description of why you are interested in this project. Informal interviews will be held for shortlisted candidates

Deadline: 8th November 2021

Contact details: For any queries please contact r.ewe@imperial.ac.uk
