

StudentShapers Recruitment: Calling all 3a MBBS students

Co-creating a digital health curriculum

Bursary: £60 per half day for 9 weeks = £540

Who should apply:

MBBS Student Phase 3a / Year 5 x1

Campus/Location: Based at Charing Cross Reynolds Building, but can be remote

Project details:

Digital health curriculum development is starting across Imperial's medical school, including in our undergraduate primary care education unit. There will be new digital health sessions in the next academic year. This is therefore an ideal time for a student shaper to get involved, as they will be able to make significant contributions to shape the curriculum.

The student will be co-designing the overall approach for teaching digital health in four key areas: remote consultations, artificial intelligence, patient generated data and electronic patient records. Their expertise in their lived experience as students of unmet digital health teaching needs, as well as strategies for delivering such teaching, would be highly valued. Faculty will meet with the student regularly to ensure they feel supported in this partnership and the goals are being met.

The ideal student would have a curiosity about those four key areas of digital health, and be passionate about co-designing content that is engaging and accessible to our diverse cohort of Phase 1 and 3 medical students. It would be ideal if the student also had some content creation skills (such as digital/traditional artwork, video/podcast creation, data visualisation skills, basic to intermediate coding skills and social media engagement strategies).

How to apply:

Applications (up to 400 words) should be made via the 'Student Expression of Interest' form on the StudentShapers website ([here](#)) or accessed using the above QR code. This will then be distributed directly to the appropriate staff partner. Informal interviews may be used for selection if needed.

Deadline: 15th May 2023
